

Simple Instruation

Pls Check the CD Disk Of All Software &Instruction Before you tested it !

So here i made simple Instruation for your !

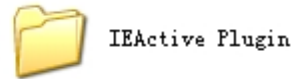

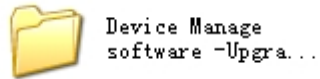

1.Pls install Main Software below For PC use and manage the software !

So you can configure it !

“CMS ”(General_CMS_V3.0.9.18.T.20130726)

& “Device manage”(General_DeviceManage_V2.5.2.0.T.20150428)

&”IEActive Plugin”(Active.exe)

2.After you install the “CMS ” & “Device manage”

Pls find the Icon in the desk of your PC !like below:

CMS

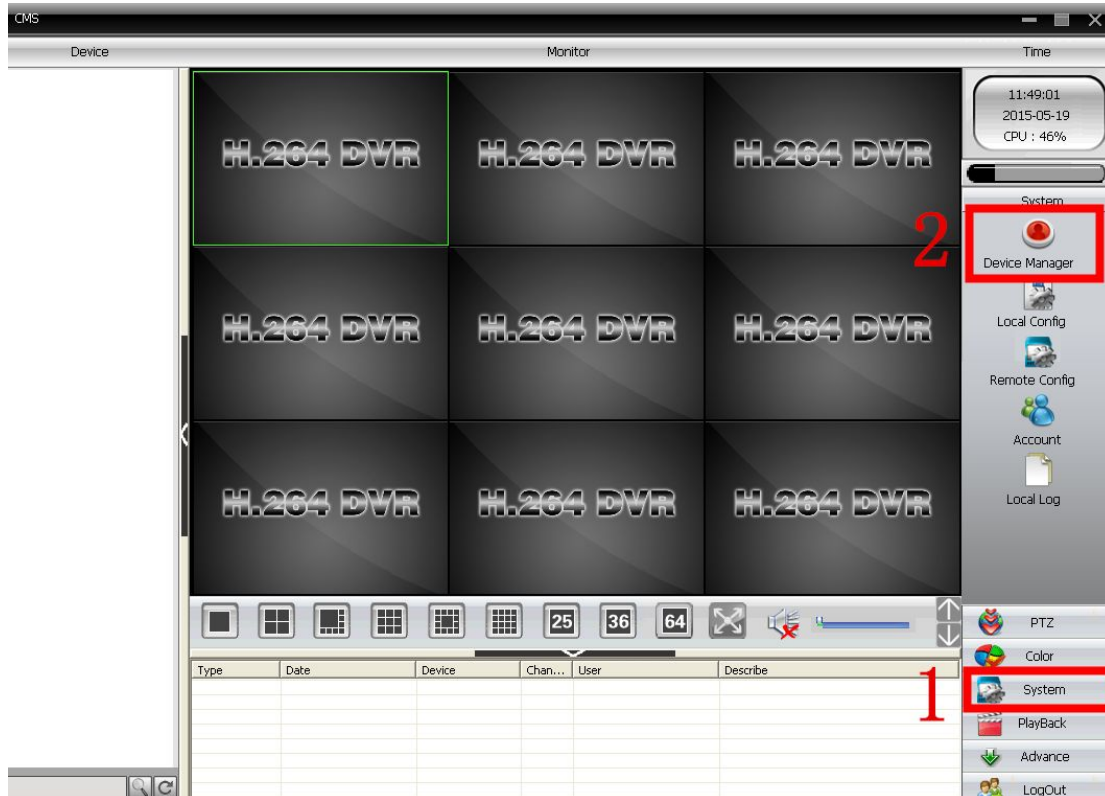

DeviceManage

3.CMS software can set up the password, Default : user name :Super ,Password:empty

And then,pls “Login”directly

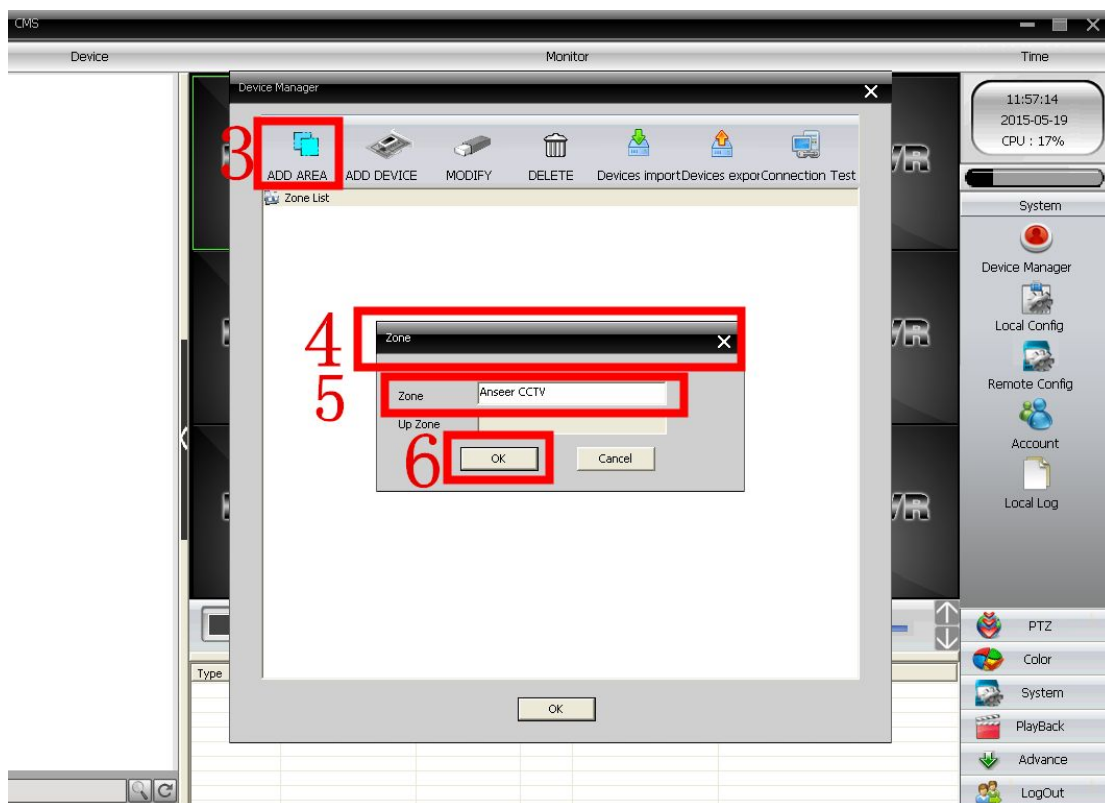

A screenshot of a 'Login' dialog box. It has a title bar with 'Login' and a close button 'X'. The dialog contains two text input fields: 'User Name' with 'super' entered and 'Password' which is empty. Below the fields are two checkboxes: 'Save Password' and 'Auto Login', both of which are unchecked. At the bottom are two buttons: 'Login' and 'Cancel'.

4.

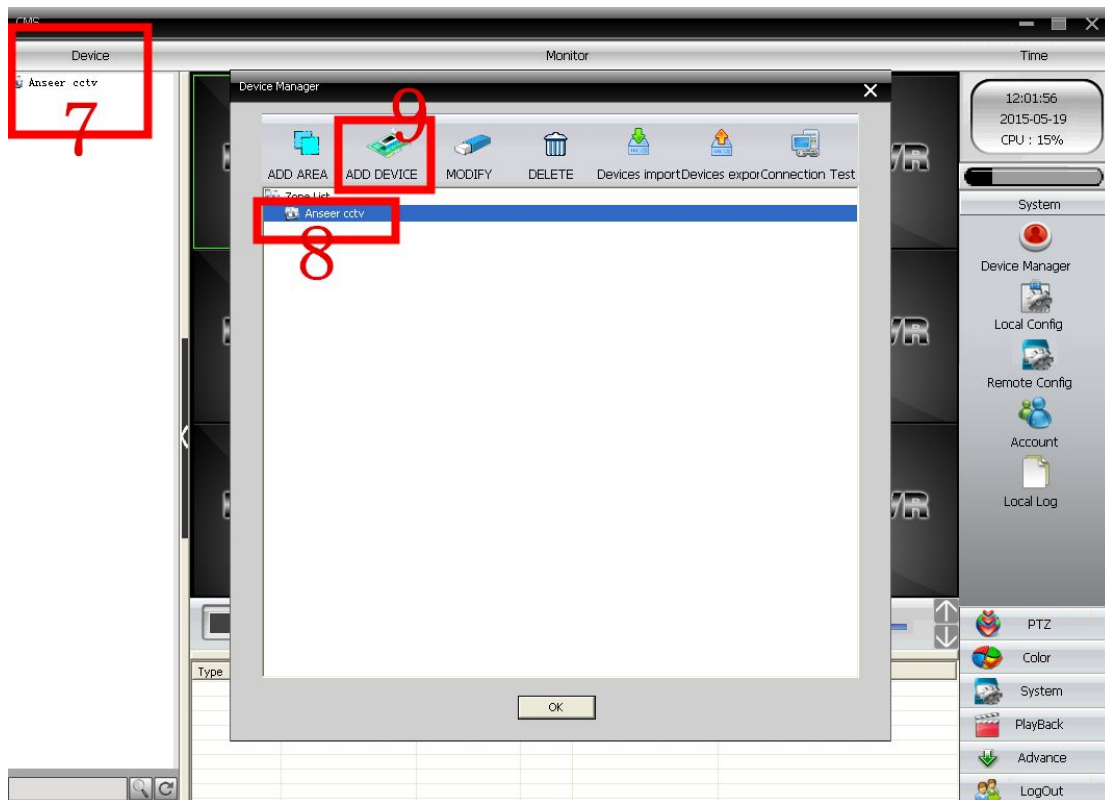

Pls Click “system” 1 and then ,click “Device Manager” 2

5.

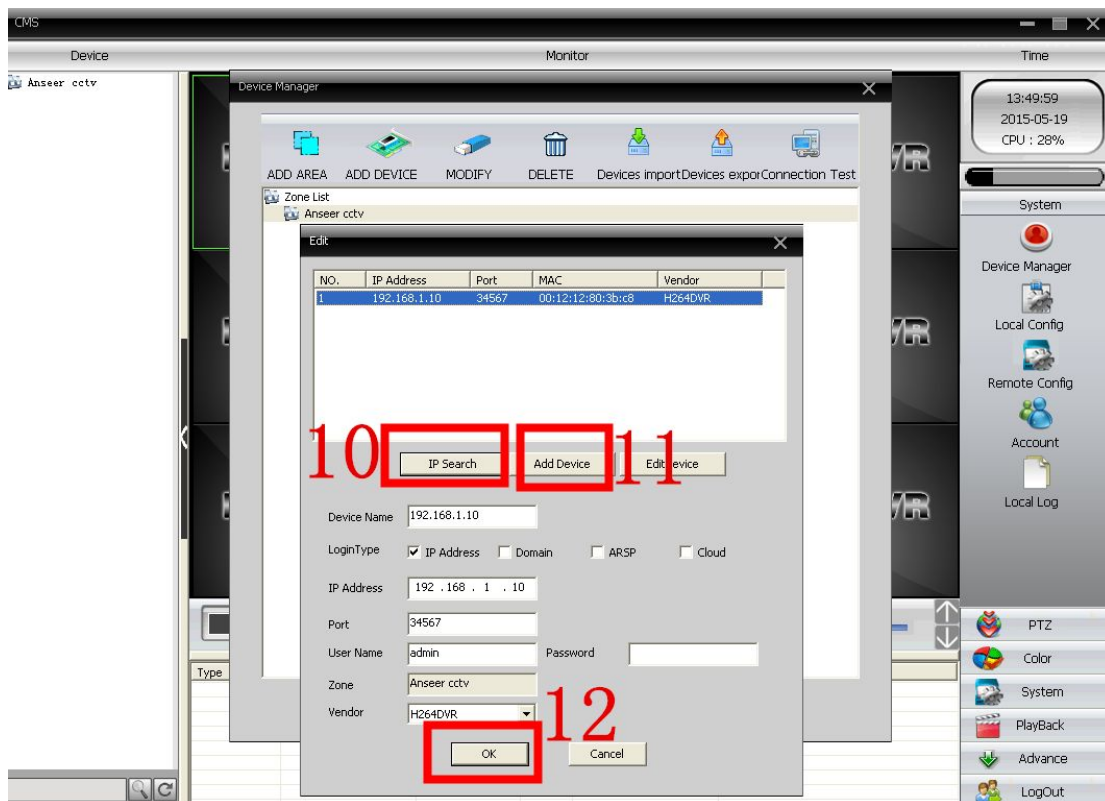

Pls click “Add Area” 3’, and then establish your “Zone”, as 4.5.6 step!

6.

After you 'add area' you will see '7' in the list, then choose '8' and click '9'

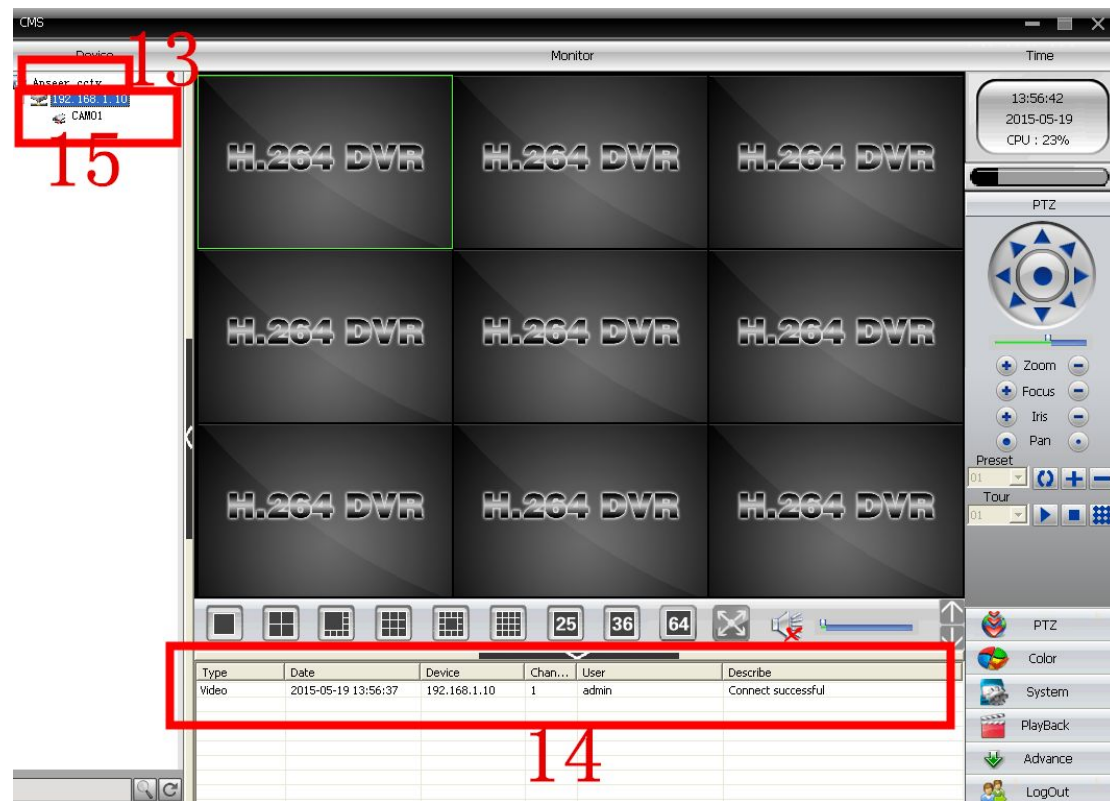

7.

pls click "ip search"10, and then "add device"11, pls ensure the ip address is the same as

your router or PC 's ip address and ensure the camera directly connect with your router ,so it can add succeeded! Then ,confirm click “12”

8.

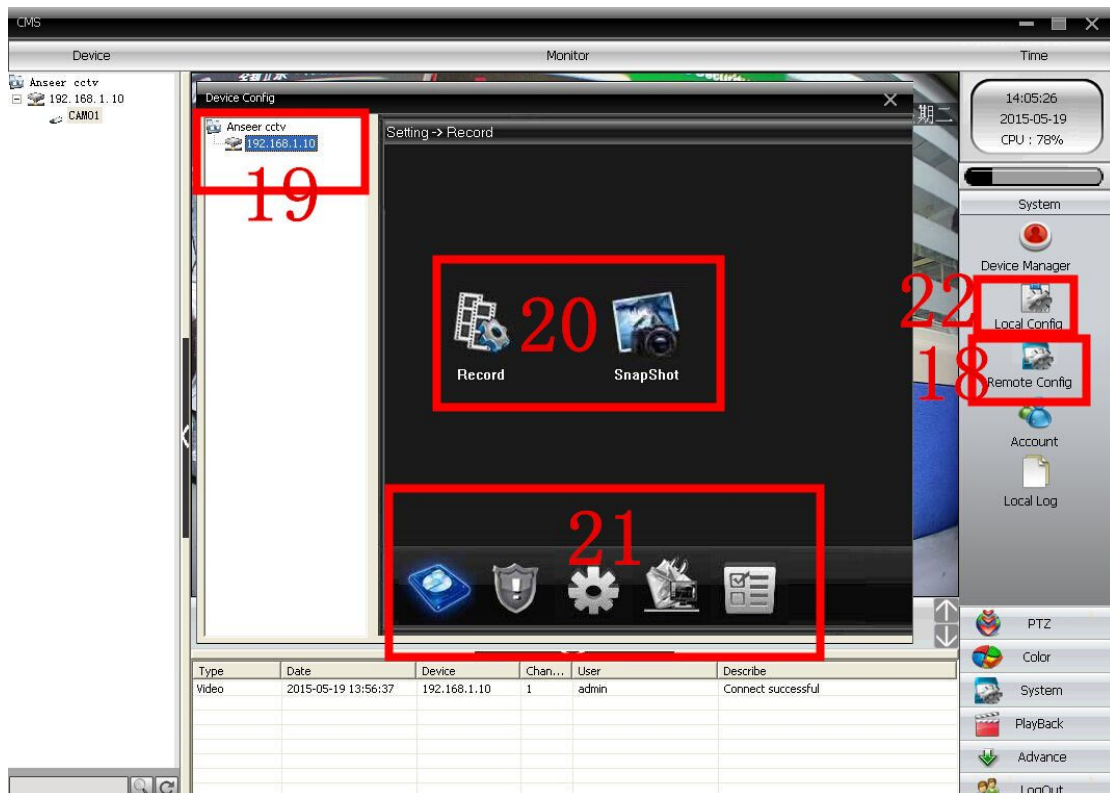

Pls see 13, you will find the device has been added successfully,see “14”, then,pls click “15”, you will see the video

9.

Pls click the "16", and then you will see "17"

10.

For the camera 's information and function ,pls see pictures ,click "18"remote config for the camera ,then you will see your device "19"then you can check 20 ,21 for more information of ip camera ;s function!

11.for ‘local config ‘ pls see and check it!
